

Executive Summary

ES.0.0.1. This Analytical Data Report (ADR) presents a data summary for the physical and analytical data collected during field investigations within Operable Unit (OU) 10 located at Hill Air Force Base (HAFB or Base), Utah. Data presented in this ADR were collected between February 1, 2002 and December 31, 2002 as part of the on-going Remedial Investigation/Feasibility Study (RI/FS) for OU 10.

ES.0.0.2. During 2002, OUs 9, 10, and 11 were reorganized and realigned under OUs that have similar groundwater contaminants and similar remedial objectives. The 1100 and Pond 7 Areas were transferred from OU 10 to OU 9. Presently, OU 10 consists of only the 1200 Area.

ES.0.0.3. Field activities that have been conducted at OU 10 during the RI/FS process include: cone penetrometer testing (CPT) and direct-push groundwater sampling, monitoring well installation and sampling, water level measurements, field drain and surface water sampling, and soil sampling.

ES.0.0.4. The field and analytical results associated with the CPT program, shallow groundwater sampling, monitoring well sampling, water level measurements, field drain and surface water sampling, and soil sampling are documented in this ADR. Field investigation activities performed and data collected subsequent to this report will be documented in the OU 10 RI/FS report. Field activities performed and data collected prior to this ADR are documented in the *Final Analytical Data Report for Operable Unit 10, May 1, 2001 through January 31, 2002* (CH2M HILL, 2002).
