

EXECUTIVE SUMMARY

This Final Analytical Data Report (ADR) presents a summary of physical and analytical data collected during field investigations within Operable Unit 8 (OU 8), Hill Air Force Base (Hill AFB), Utah. Data presented in this ADR were collected between 27 March 2001 and 15 February 2002 as part of the Remedial Investigation/Feasibility Study (RI/FS) for OU 8. Data collected prior to March 27, 2001 were summarized in the *Final Analytical Data Report (ADR) for Operable Unit 8* (Montgomery Watson Harza, 2001a) and in the *Final Remedial Investigation Report for Operable Unit 8* (Montgomery Watson Harza, 2001b).

Various field investigation programs have been conducted during the OU 8 RI/FS process, including monitoring well installation and sampling, Cone Penetrometer Testing (CPT), direct-push groundwater sampling, and residential groundwater, surface water, and air sampling. Field and analytical data collected during these field programs in the period between 27 March 2001 and 15 February 2002 are documented in this ADR. Additional details regarding the RI/FS data collection and interpretation efforts are contained in the *Final Remedial Investigation Report for Operable Unit 8* (Montgomery Watson Harza, 2001b).
