

Executive Summary

This report presents a summary of the Hill Air Force Base Operable Unit 9, calendar year 2001 inventory of deferred sites. The inventory was performed as required by the *Site Management Plan for the Operable Unit 9 Deferred Sites* (CH2M HILL, 2002a). Based on the results of the inventory, the Hill Air Force Base Restricted Use Access Map has been revised and included as Plate 1.

There are 177 Operable Unit 9 deferred sites, 117 identified in the North Area Site Inspection (SI) report and 60 identified in the South Area SI. Since the completion of the sampling for the North and South Area Site Inspection reports in 1997 and prior to the calendar year 2001 inventory of the deferred sites, five deferred sites have been investigated (buildings 238, 267, 268, 514, and 741). Based on these investigations, no further remedial actions are warranted at buildings 267, 268, and 514. It is recommended that these buildings be removed from the OU9 Deferred Site Inventory List. The investigations conducted at buildings 238, and 741 did not constitute a complete site investigation. Buildings 238 and 741 will remain on the OU9 Deferred Site Inventory List until a complete site investigation can be conducted.

The inventory identified 48 sites as accessible for sampling. A site investigation will be conducted at each of these sites in calendar year 2002. The sampling to be conducted at these 48 sites was included in the *Site Investigation Work plan for Operable Unit 9 Deferred Sites - Phase 1* (CH2M HILL, 2002b). Sampling will consist of collecting both soil and groundwater samples unless the site is located over a known Operable Unit groundwater contaminant plume being investigated under the Comprehensive Environmental Response Compensation and Liability Act. Results from the Phase 1 investigation will be included in the Operable Unit 9, Calendar Year 2002 Inventory Report for Deferred Sites, to be completed in March 2003.

There were 15 additional sites identified as demolished in the calendar year 2002 inventory. These sites will be sampled in FY03 and the findings included in the Operable Unit 9, Calendar Year 2003 Inventory Report for Deferred Sites, to be completed in March 2004.
